

Beneficial microorganisms for soil, plants and animals.

Our products

D2 (*L. acidophilus* D2/CSL CECT 4529)

- Occurs naturally in the gastrointestinal tract of chickens
- Colonizes the different gastrointestinal habitats
- Restores and maintains the physiological balance of the intestinal flora
- Exhibits competitive exclusion with pathogens
- Better animal health and zootechnical performances

LACTOSIL (*L. plantarum* 14D/CSL)

- Autochthonous bacteria strain of forage crops and silage
- Fast acidification and multiplication
- Strong dosage in terms of cfu/g of silage
- Suitable for all kinds of silage including organic methods

BIOSILGAS (*L. plantarum* + *L. casei*)

- Strong dosage in terms of cfu/g of silage
- Improves silo fermentation
- Better stability before and after silo opening
- Better recovery of biomass/energy for methanogenesis
- Best methanogenesis efficiency
